MAINTENANCE AND CLEANING OF TILES

Maintenance of porcelain tiles on dry surfaces is relatively easy. CDK tiles are highly scratch and stain resistant.

- By regularly sweeping the floor, you can help avoid scratches that small pebbles or sand can create.
- Make it a habit to always wipe the soles of your shoes on a mat before entering the house. Thoroughly wipe up any spills using plain warm water.
- While they are not likely to stain your ceramic tiles, spills may stain the grout between the tiles and if they are left to sit for too long, may also stain the actual tiles.
- Plain water is the ideal cleaner because it leaves no residue if you dry the surface of the tiles thoroughly after cleaning.
- If tiles are left wet after cleaning, there may be some unsightly mineral residue after the water dries, but this can easily be removed by spot cleaning.
- If stains resist cleaning with water alone, you can use a mild acidic solution, such as white vinegar. Use it highly diluted and rinse with plain water then dry.
- As food stains are acidic in nature, try using a mild alkaline solution.
- Use common detergents sparingly, rinse with plain water and dry thoroughly.

IMAGE REPRESENTATION OF TILES

Notice: The tile images shown in this brochure are for illustrative purposes only. Due to differences in screen displays, lighting conditions, and printing processes, actual colours, patterns, and finishes may vary from what is depicted. We recommend viewing physical samples or mockups before making a final selection.

TILE-LAYING RECOMMENDATIONS

All CDK products are subject to size and shade variations. Please check the size, batch number, caliber, tone, choice, colour, quality of the pieces before the installation, as no claims will be accepted once the tiles are installed.

Place some tiles on the floor -2 or 3 sqm- and check the overall technical and aesthetic characteristics with care and check if there is enough product to finish the work.

Manufacturer's responsibility is only limited to replacement of defective material if any, prior to fixing of tiles and we will not entertain claim of any nature after the tiles are installed.

Therefore, if any issue is found on the delivered product, the contractor for installation or the client should not install the tiles. The issue should be communicated to CDK for investigation and further action for resolution as required.

The substrate must be a compact cement bed. Levelling system ensures flatness between tiles avoiding movements during the mortar setting. This reduces the time for the ceramic laying obtaining a perfect lippage-free finish. Avoid movements between the ties due to the mortar setting.

The width of grout joints must be established by the installation supervisor, unless grout widths are regulated by national laying standards. The grout colour should be selected according to the colour of the tile. We recommend to select a matching colour. Before using fine-grain coloured grout on lapped, polished or brushed products, always test it, if the pigment is very adhesive, it may be very difficult to remove.

We recommend to lay the tiles by using suitable adhesives for each kind of product and surface. As general rule, tiles must be installed in the same position. The minimum joint is 2 mm for rectified tiles, although we suggest a higher joint for big size products. After grouting, remove any excess product as quickly as possible by repeatedly washing the area with a sponge and water.

Steps to follow

1. First, set the tool to the scale according to the tile thickness.
2. Introduce the crossheads and continue laying the adjacent tiles.
3. Put the wedges in the crosshead manually.
4. Tighten the wedges with the pliers to level the pieces.
5. Allow for setting for the time recommended by the manufacturer of the adhesive cement.
6. Remove the crossheads. Hit the crosshead with a rubber mallet or with your foot in the direction of the joint. Do not hit the wedges.

The company will not accept any claim if this is due to the problems caused by not following these suggestions and Instructions.

 Shade variation across the batches is inherent to the manufacturing process and the pre-laying colour comparison is recommended.

R- RATING AND GLOSSINESS TABLE

Description	Standard Test	Matt	Honed Matt	Satin	HD Digital	Glossy	Polish	Crystal Polish
Finish	DIN51130	R9	R8	R6	NA	NA	NA	NA
Glossiness(@60° Gloss meter)		5-7	5-7	20-25	90-95	95-98	98-100	100-105

Note:

1. ISO 13006:2018: Reference may be made to this International Standard for information regarding requirements which are noncompulsory, but which are listed as "test method available".
2. Determination of linear thermal expansion. Most ceramic tiles have low levels of linear thermal expansion. This test is intended for tiles that are installed in conditions of high thermal variations.
3. Certain decorative effects may tend to craze. They shall be identified by the manufacturer, in which case, the crazing test given in ISO 10545 -11 is not applicable.
